ABOUT ME

I am a **Full-Stack Developer** with experience building interactive and responsive interfaces, integrating APIs, implementing business logic, managing servers, optimizing system performance, ensuring efficient version control and code quality, and collaborating effectively with teams to support the continuous delivery of projects.

PROFESSIONAL EXPERIENCE

Mid-Level Full-Stack Developer

MJV Tecnologia

July 2025 - Present

- Developed and maintained applications following **Hexagonal Architecture**, promoting greater code decoupling, maintainability, and testability;
- Worked on **monorepo** projects using **NX**, creating and managing reusable **Angular** libraries with **NGRX** for scalable and consistent state management;
- Developed backend applications with **Node.js** and **NestJS**, integrating **Redis** for caching and message queues, as well as configuring circuit breakers to improve service resilience;
- Contributed to a project focused on automating mobile application deployments to the Google Play Store and Apple App Store using **Fastlane**;
- Worked on the development of a **Backstage** platform, including GitHub and Bitbucket integrations, plugin implementation, RBAC configuration, and other platform features.

Mid-Level Full-Stack Developer

Solution TI

December 2024 - Present

- Developed new features for a digital vehicle registration system integrated with official DETRAN platforms, creating dynamic and optimized interfaces using **React**;
- **Took ownership of the Mato Grosso digital vehicle transfer system**, fully integrated with DETRAN-MT platforms, ensuring its maintenance, evolution, and stability;
- Implemented robust frontend-backend integrations using **Java** and established design patterns, ensuring secure and efficient communication between systems;
- Actively participated in **Scrum** ceremonies, including daily stand-ups, sprint planning, and reviews, contributing to team alignment and on-time delivery;
- Configured and managed **Docker** containers, creating isolated and scalable environments for development and production;
- Planned and tracked tasks using **Jira**, improving visibility and focus on sprint priorities.

Junior Full-Stack Developer

Crase Sigma

September 2023 - December 2024

- Optimized and maintained the Crase Sigma mobile application, built with **Ionic** and **Angular**, ensuring consistent performance across **Android** and **iOS** devices;
- **Migrated and integrated legacy data from COBOL systems** into modern ecosystems, creating continuous and compatible data flows between legacy and modern applications;
- Developed modular and reusable user interface components with **Angular**, applying state management strategies to improve performance in high-traffic scenarios;
- Designed and implemented **RESTful APIs** with **Laravel**, using caching and query optimization techniques that reduced latency by more than 30%;
- Containerized applications with **Docker**, improving standardization and simplifying the setup of development and production environments;
- Configured and managed **Apache2** servers for high-availability web applications, including performance tuning and security hardening;
- Structured Git workflows, including branch management, conflict resolution, and **CI/CD** pipeline implementation to improve development efficiency.
